

Car Rental Android app

fireArt *open source CRM. Good Ideas for business!*

Getting Started

Welcome to the **fireArt** *open source CRM* for Booking/Trip/Delivery services automatization! This is a good choice for business. In fact - orders, products, user's GPS locations as customers or workers is the base objects for manipulation. Easy start for businessman to organize business information structured storage.

fireArt *open source CRM* Database backend supports raw data objects storage for saving and manipulation by the **Admin panel** (demo by the link <http://247.autozvit.com/admin>). Customer's Website (a lot of Website Templates) is complemented by the **Dashboard** functionality (demo by the link <http://247.autozvit.com/dashboard>).

To build a responsive and accessible **fireArt** *open source CRM* Database backend Android/iOS apps (demo by the link <https://play.google.com/store/apps/details?id=autozvit.com.fireart>), **Admin panel/Dashboard** and Customer's Websites need to use **fireArt** API key. For generate and upload private **fireArt** API key use link <http://247.autozvit.com> and put to **fireArt** software application (Android/iOS apps, javascript Web API library for **Admin panel/Dashboard** and Customer's Websites).

Accessibility

Put private **fireArt** API key to the Android app project. Start *Android Studio* and open the Android app project. Find *fireart_api.xml* (.../res/values/) in the project. Write **fireArt** API key data string to file (update *put_key_here* data string). Specially for test purpose upload **fireArt** API key to the Android app *Settings* menu *API key* item supporting.

fireArt Car Rental **Admin panel/Dashboard** demo links with API key:
